Here's A Quick Guide To Photoshop analysis, whole-genome resequencing is desirable to avoid errors that result from the use of single-molecule methods. As such, the two methods described here, SNP analysis using allele-specific PCR and whole-genome resequencing using a *de novo* assembly, provide powerful alternatives for generation of phylogenetic analysis of large numbers of samples with minimal effort and cost. However, our results indicate that the two methods are complementary. For example, to identify the direction of mutation and for detection of polymorphisms, allele-specific PCR may be sufficient because both methods detect mutations on both strands, but only whole-genome resequencing identifies the parent of origin. For generation of a tree based on total genomic divergence, allele-specific PCR may be more cost-effective than whole-genome resequencing. It is noteworthy that resequencing of pooled samples resulted in recovery of a very high proportion of SNP polymorphisms (\>95%) and a considerable percentage of allele-specific PCR amplicons (\>20%). Therefore, this method is a powerful tool for sampling the diversity of a species and is especially suitable for comprehensive comparative analyses, such as determination of genome-wide patterns of polymorphism. Furthermore, the data obtained by SNP analysis using allele-specific PCR is as informative as whole-genome resequencing data, in that the latter requires an open-source tool for assembling the reads, while SNP analysis using allele-specific PCR is straightforward

Q: How to hide div if it has no children I am trying to display an element if it has children, and to hide it if it has no children. Here is my current code: if ($(this).children()) { $(this).css("height", $('div').height() + "px") } else { $(this).css("height", "none") } How can I do that? A: You could use :empty selector, like this: $(this).css('height', $(this).children().length == 0? 'none' : $('div').height()); Note: this will work only if there is no padding or margin added to the element, otherwise the children height will not be calculated correctly. jsFiddle example A: Try this $(this).css("height", $(this).children().length == 0? 'none' : $('div').height()); Public workshop to be held on Sept. 14 Gravity has a strong effect on our universe. Everything we see, touch and experience on Earth is affected by this gravitational force. What I learned in physics class is that the earth moves around the sun. The sun doesn't move around the earth. It's the other way around. Move Earth and everything you experience will be reversed. What if you travel to another galaxy? Think what happens to time. If you don't know, let's look at gravity on Earth. What is gravity? Gravity is the force that causes objects to be pulled to Earth. If an object is pulled to the Earth at 9.8 m/s2, the acceleration of the object is 9.8 m/s2. On Earth, objects accelerate around the center of the Earth. If this happens around the sun, things happen again. But there's a problem. Newton's laws of motion only work on Earth. Before I talk about gravity, let me explain why this can be a problem for you and me. If you travel to another galaxy, your body will be pulled in another direction. Your body will move in the opposite direction of the Earth's movement around the Sun. Try to imagine this. You know it's true. I know it's true.
