History AutoCAD was developed by the original three AutoDesk founders, Bill Evans, John Walker and Alex Yeary, starting in 1981. AutoCAD was originally known as "AutoCAD Electronic" and AutoCAD Electronic version 1.0 was released on October 27, 1981. The name AutoCAD was changed to its current name in 1985, in honor of Louis Billiet, an AutoDesk product manager. AutoCAD 2.0 was released in 1985, and AutoCAD 2.01 in 1986. During the early years, AutoCAD was one of the leading CAD programs in the business market; it dominated the desktop CAD market until the late 1990s when the desktop market shifted to Microsoft Windows-based CAD programs. In the late 1980s, AutoDesk embarked on an effort to make AutoCAD software more accessible to small and medium-sized companies. In particular, the company expanded the availability of AutoCAD software on the personal computer through the purchase of a number of computer graphics licenses from the former Hewlett-Packard Graphics Division. These licenses included the FLATON 1 and FLATON 2 graphics boards, which enabled the use of AutoCAD on the computers of new business owners. In 1987, AutoDesk introduced the first commercial AutoCAD version for the Macintosh computer with AutoCAD 1985. Later, in 1995, AutoDesk acquired the rights to develop the application for the Apple Computer Newton handheld system. In early 2001, AutoCAD was renamed AutoCAD 2002. The first version of AutoCAD was developed in the early 1980s at the University of Waterloo, where the original creators of AutoCAD met to discuss the next stage of AutoCAD development. They knew that the product needed more sophisticated capabilities to be used in the business environment. The university's original group of developers was Bill Evans, John Walker, and his son, Mike Walker. These three first released AutoCAD on 27 October 1981, from their home on a DEC PDP-10. They were initially the only developers of AutoCAD, and only the original three worked on AutoCAD from its inception until 1987. In 1982, Evans and Walker released AutoCAD onto the Macintosh. This release led to the start of a direct relationship between the developers of AutoCAD and Apple Computer. In turn, Apple introduced AutoCAD to the personal computer market. In 1985, when the Mac personal computer market shifted to the IBM

The following subsections list more details about each of these APIs and their usage. === Visual LISP (Vislip) ------------------- If Vislip is installed on the system, then Vislip is a Lua-based scripting language, which is embedded into the environment. Vislip allows one to quickly develop prototypes of functions that run in AutoCAD Serial Key. Once a prototype has been created, it can be saved to a file or directly used by AutoCAD. This allows the function to be reused later. The goal is to achieve great user friendliness. Vislip is closely integrated with AutoCAD. It can be used to develop functional extensions, prototype AutoCAD API calls, check basic AutoCAD API concepts, and for scripting. The latter is most commonly used. The syntax of Vislip is very similar to Lua and is intended to be used at least as part of the student's first exposure to programming. For a basic introduction to the Vislip language, see the file ``Vislip/intro.docx``. The main functionality of Vislip is described in the following sections. a1d647c40b
