good. Plus, you'll get a healthy respect for your classmates, teachers and principal. I know how kids think. I grew up with parents who put pressure on me to make the top-25 of my class. Even if I barely made it in, they made me feel like a failure. And I hated it. I was smart, but I didn't want to be the teacher's pet or the student with the bright ideas. I wanted to be the student who could get shit done. It took me years to break out of the mold and be comfortable with my own merit. There's no reason you should have to. If you need to

tell me about your girlfriend or boyfriend's family's ability to pay the rent or how you can't find a decent job, then you need to go into a different interview. I will tell you about my family's situation and how I ended up in university, but I can't help you with your problems. I'm sure some of you are wondering about your job, if you'll get hired again. I can't help you there either. I get many job inquiries, but I rarely end up hiring anyone. Most of my students end up much better prepared for work than I am, and I need to focus on them, not on

applicants. I'm not hiring a job; I'm hiring a future. Like everything else in life, there's a balance. You've got to be smart enough to see the opportunities in the world and take them. You've also got to be able to ignore the ones that aren't relevant to your goals. You're lucky, most people don't get two chances to be born. If you don't make the most of your first chance, you'll never have another.
