Key elements of AutoCAD AutoCAD makes it easy to create and edit a variety of 2D drawings, including technical drawings, maps, plans, blueprints, logos, and CAD models. The most important element of the AutoCAD product line is AutoCAD LT. AutoCAD LT is designed to be a free, user-friendly CAD software program designed to be used by non-CAD professionals, such as office and industrial workers, interior designers, construction managers, and engineers and architects. Autodesk offers AutoCAD LT as a free download to users with a computer and a current Internet connection. If you would like to purchase AutoCAD LT, you must pay a monthly or annual license fee. In addition to these two primary versions of AutoCAD, Autodesk also offers AutoCAD Map 3D, and AutoCAD Web 3D. AutoCAD Map 3D is a line-drawing program that creates 3D maps and 3D designs, and allows users to annotate maps using a computer mouse. AutoCAD Web 3D is a web-based computer-aided design (CAD) application that allows users to create 2D and 3D drawings. With each AutoCAD version, there is a growing selection of add-on and plug-in software. In addition to tools that can import and export files, there are also plug-ins that facilitate the process of generating custom technical drawings and maps. Autodesk has even included its own files for 2D engineering, a portion of AutoCAD's software that is so ubiquitous in industry that it has become the de facto standard. AutoCAD vs. other CAD software AutoCAD is a leading software application for creating and editing two-dimensional (2D) and three-dimensional (3D) drawings. Unlike some other CAD programs, the majority of AutoCAD's drawing capabilities are implemented in the AutoCAD® main program. AutoCAD has many features and functionalities that are unique to its product line. Below are some of the main differences between AutoCAD and other commercial CAD programs. AutoCAD and other CAD programs: key differences Primary difference: AutoCAD is based on a single-user mainframe-style application, whereas the majority of CAD software applications on the market today are network-based. Network-based CAD programs are designed for use with multiple users

Groups of users with particular user rights can be created for individual users or groups of users. The groups are defined by the user rights assigned to each user. The key difference between the standard user and group model and the custom model is that users and groups do not have names, but are identified in the custom model by their group memberships.
