What's New in the AutoCAD?

Workflow Improvements: Import linear dimension data, automatically create symbol definitions, and track the lines of reference for a project. New features in the drafting tools: Automatic generation of the reference plane for DWG, DXF, and SVG files Automatic distance measurement between points or objects (SVG) Live Drawing feature to give you the ability to insert objects or modifications on the fly, while you're working in your design Object Tracking: Your drawings contain objects that you add and remove. Adding and removing objects while drafting is a crucial step of your workflow. With AutoCAD, objects are automatically tracked and can now be displayed at any time. For example, when you change the color of a text box on your drawing, AutoCAD still knows the object's position. Your drawings can also be split into different layers in order to manage your objects. Also, with the new Object Tracking feature, you can track objects even when you don't have the original file open. The results of tracking are stored in the drawing, so you can use them as soon as you switch back to your drawing. Existing users will see the new Object Tracking feature in AutoCAD upon the upgrade. The new Object Tracking feature is available to new users when they sign up for AutoCAD from now on. Follow up on previous changes: Update all drawing objects that are related to your active drawing. Automatically load drawings in the same folder as your active drawing. To start your list of drawings, you can follow the "follow-up" button.
