How to override the `__str__` method for models in Django rest framework? I am using Django rest framework. Here is my models.py: `class Users(models.Model): username = models.CharField(max_length=20) password = models.CharField(max_length=20)` I am storing password in hashed format as the default django rest framework is not doing that. I am using `UserSerializer` for reading the data. The default hashed format is giving me this error: `(fields.E122) The value of field 'password' must be a value containing only Unicode plain scalar content, except in a quoted or unquoted byte-string literal` So, I want to override the `__str__` method [ca3bfb1094](#)

Download the Autodesk client and install it. Save the license to the computer. Click on the Registration Tool icon. Enter Autodesk account information. Enter the serial number. Wait until Autodesk Automotive login window is displayed. Click on the 'Login' button. Click on the 'Remove License' button. Enter Serial Number. Click the 'Download' button. Exit from the license. Uninstall Autocad. Uninstall Autodesk client. I tried the same on Win 7. I saved the license to the computer and installed Autocad 2012. I entered the serial number of the old license and was able to remove the license by clicking the "Remove License" and entering the serial number. A: Normally the license key is stored in the registry. I would assume Autocad 2012 has the same interface. If this is the case then it is easier to just use a reg file. Q: Sending email in cloud foundry using ruby I am trying to send mail through ruby in the cloud foundry. (video: 3:16 min.) **Embedded PDF Content:** Organize your drawings with embedded and linked reference content. Embedded content is available when you view the drawing as an annotation. (video: 3:59 min.) **Drawing Conflicts:** Find and resolve drawings that conflict with your current state. (video: 3:16 min.) You can find more information about AutoCAD 2023 and download the updates from the Autodesk website. 2. **Changes and/or Improvements to the Task-Based Approach:** The new task-based approach has been extensively redesigned to improve efficiency and usability, from the overall workflow to how you interact with individual features. The Task-based navigation and toolbars have been completely revised to make it easier to find the tools and commands you need in the right place at the right time. The task-based approach makes it easier to find information when you need it and automatically completes actions with the tools you select. Select the Task-based navigation icon from the View menu and navigate to the Task-based options. You can now change the Order of Task by dragging and dropping tasks in the Task Manager. You can also change the Order of the active tool by selecting a tool and scrolling to the bottom of the Options Pane. The Autodesk Task-based navigation is not compatible with the legacy ribbon tools, so you'll see an alert if you attempt to navigate to a legacy tool in Task mode. The AutoCAD Task-based navigation automatically updates to show the selected task only. If you have more than one active task, you can display the selected task by navigating to View > Task-based Navigation > Task List. Some tools have been renamed. The Shape tool, Transform tool, and Raster command are now called the Toolbox, Select tool, and Path tool, respectively. The Add lines or the Add region tools are now named the Line command and the Region command, respectively. 3.
