A common pattern of web development is to introduce an initial wrapper, which, for better or worse, is then built on a framework. These patterns create a repeatable framework for creating desktop applications, but they're often too tightly intertwined to actually scale. Launchers are products that help you organize the content of your desktop. They're like a deck of cards, except you don't have to shuffle the links into order. You can focus on browsing the sites instead of organizing them into folders and subfolders. You can find a handful of launchers for every platform, but we're only going to cover the desktop clients. There are some great choices for Mac users, but Windows PCs have a better selection, starting with the most popular free option. If you're a Google Chrome user, I can't recommend Aria enough. It's mature and feature-rich. It's clean and simple. And,
