But now I can't connect iPhone 4 or 4s to it through Bluetooth, and I am having a problem with it. For IOS 9 it works fine, but I can't get iOS 10 and also Android 4.4.4, 4.4.2, and 4.4.3 to work (Don't ask me why they don't work, cause they never work, they usually just freeze). But when I try to connect to Windows 7 using iPhone 4 or 4s, it successfully gets connected, I can open Bluetooth settings and do everything there, but when I'm trying to send something to my computer from iPhone, it fails. I have tried to turn Bluetooth on and off on both phone and computer, and reboot both, but still I can't connect to computer. I have also tried to connect to other Bluetooth devices and connect to iTunes and it works fine. I'm pretty sure it's Bluetooth related problem, since when I try to connect to iTunes from iPhone it fails. Any ideas? I tried to search for similar questions, and I came across this one: I tried all of the solutions, but I couldn't do anything to solve my problem. A: I had the same problem and it took me a long time to figure out. Try to set the bluetooth on your iphone for your laptop. Simulated and Applied Fuzzy Logic for Differentiating Atmospheric Chlorine Dioxide Particle Number Concentration Based on Light-scattering. In this study, simulations and experimental analyses based on a new fuzzy logic (FL) algorithm are performed to simulate the differentiated characteristics of atmospheric particles. The experiments are designed with the collection of the light scattering radiance profiles and the detection of the particle concentration number. These
