2012 for free, descargar contaplus gratis downloadA single test procedure is required to assess both susceptibility to antiepileptic drugs (AEDs) and mutation carrier status of the drug
metabolizing enzyme CYP2C9 (CYP2C9*2 and *3 alleles). We report on a combination procedure that permits CYP2C9*2 and *3 allele discrimination by short-term incubation of buccal
mucosal cells with AEDs, while a reliable functional measure, the O-dealkylation activity of CYP2C9 is assessed in vitro by use of a specific CYP2C9 probe substrate and analysis of
the resulting oxidized metabolites by HPLC. The method was validated on CYP2C9*2 and *3 alleles. Out of 914 healthy volunteers, 109 were heterozygous for the CYP2C9*2 and
CYP2C9*3 alleles. In vitro results correlated well with genotyping results. In vivo validation (data on 260 patients) showed both good agreement between genotyping results and
functional findings, as well as a high discriminatory power of the combined assay. The procedure is suitable for clinical use to study relationships of CYP2C9 genotype, phenotype and
drug metabolism. One Hundred Years of Solitude You may not know what you're getting yourself into. Okay, maybe you do. You may know that it's a book. You may know that
