I need my photographs on the internet, and I usually have multiple web-services with varying online policies, so picture quality has to be consistent, no matter where the image is posted. With Lightroom it is simple. Even with a working Life-ever-Story I can publish my photographs. I can give clients access to their images, either through one-use accounts or subscriptions. Lightroom's image edition doesn't replace my GIMPShop. But Lightroom's web-based editing is sufficient for quick edits. The key difference between Photoshop and Elements is the large percentage of stock images available in Photoshop. Although I enjoy using Elements, Elements lacks many of Photoshop's features and functions. I use the stock imagery or design tools available in Photoshop over Elements. If you like to photo edit, take a look at Lightroom. They made a lot of improvements. Lightroom+Photoshop is one busy application. Distortions and Sharpen tool: The second tool that is proven as one of the best on Photoshop is the sharpening tool. The tool sharpens the image making it more crisp and clear. This feature helps to bring out the needles of a dark object in the picture to give it a sharper look. Tool Snag tool: This Photoshop tool helps in the selection of background elements such as people and elements of the room. It takes away the unwanted background by providing a new start point and a new end point. This process occurs automatically making the image cleaner. Any errors that exist in the image are eliminated automatically with the help of this tool. Hand tool: When working with your images, editing photos becomes easier if you become familiar with the software. It is so useful and simple that even managers and untrained individuals can use it. It is a tool that helps you to transform shapes. You can rotate and reposition the image, rotate the image, create layers, erase unwanted portions and then, save the document. Many layers: A feature that is an important tool in a graphic designing software,

whether it is Photoshop, or any other is the Layers. It is an automatic tool that helps you to create multiple versions of an image. With the help of this tool, you can create as many layers as you want. This allows you to create a new version of your image Crop tools: One more tool that helps you to crop images is the crop tool. At a certain square grid, you can easily crop out unwanted portions from the image and then save the image. That's all, you have this tool at your disposal.

One of the new features in Photoshop that allows you to create and share animations is the corkboard. It's an empty background to put pictures on as your own motion graphics. You can set it to any size you want and then add titles, arrows, shapes, text, or other graphics. You can also create your own custom animations that you can then share through YouTube, flickr, e-mail or the corkboard itself. (My Behance page.) You can add everything that you see on this page via the Content-Aware Scissors. It's a feature that allows you to get an automatic, natural cut out of a photo. The tool allows you to remove objects from a photo while making sure that people stay in the picture. For those of us who hate Facial Recognition, you can now make the faces in your images not quite so identifiable, but quite personal all the same. This feature is made to create faux-random images that show up in the "most liked" or "most searched" lists of conventional image sharing sites like Facebook and Flickr. Cross the road and try to get a "biker" or "sports" cut. You won't be able to do it. Create professional collages. Generate them from your favorite photographs and present them on a web page in a simple, original way. With just a few clicks, you can bring the present into your personal and professional showing. You can even make your own mini album that you can print or share online. (My webnarables page.) Make sunrises, sunsets, and moon light magical. Just like the photo tools you've used over the years, Photoshop has a feature to help you with creative flair. Elements lets you select the best colors, tones, parts of a photo and Auto Enhance. This process is entirely new because the technology used in Auto Enhance was completely rewritten for Elements. (My Behance page.)
