Several enhancements that were introduced with Photoshop CS6 and ACR for digital imaging professionals. In addition to the powerful new capabilities, it included a new and improved UI. Also, the ability to create binary masks with a simple click of the Brush tool, lasso and shape tools has increased efficiency and image manipulation. A new palette palette offers great flexibility in control of your image adjustments. The new layer is now an easy editing area where you can correct colors, contrast, light and dark tones and more. To make my point, I've included a link to a three-step divine anamorphic pictures presenting a view of the surrounding environment of a building. The surrounding environment is always out of focus in the negative spaces. The space between the buildings in the picture above is extremely wide. However, one of Photoshop's free plug-ins is Gradient Glow. By using Gradient Glow, a natural glow will just blur the image. This is very useful in many situations, and can be a way of "blurring" your image to make the negative space linger in the viewer's mind. Check out the image below! Yes, indeed, the cover picture shows some trouble spots. This is a great example of where the design tools and heuristics of Photoshop can be extrahelpful when it comes to web content development. This is an image that is most likely to be displayed on the web, when the content is viewed on mobile, tablets, and desktop—which different result than in a magazine format. If you are not aware of the flip-book format of content design, all the amazing books online can be put in the form of a flip-book. It is possible to get into this format using Photoshop, and I assure you, it's fun to do so. Adobe Photoshop is a robust image editing and retouching software used by professionals and amateurs.
