Photoshop CS5.1 has unique enhancements for working with images. However, it is still useful for creating and editing photos or working with raster images. This is a set of instructions to help those users who are new to using Photoshop. Although Photoshop CS5.1 is the newest version, the information here is still valid for earlier versions. The Basic Photoshop Features As stated in the previous article, Photoshop, like all of the programs that are available on the market, is more than just a print shop tool. As mentioned in the last article, Photoshop can be used for several graphic design projects, web design, and even art projects. Following are the Photoshop basics:

Working with an Image: A variety of tools are available for working with raster images. The image viewer supports all of the most common formats and allows users to view the image in a variety of ways. The image viewer also supports resizing. Most of the major graphic programs use the same files. Like other programs, Photoshop uses a layered approach, so that it can combine more than one type of object (e.g., a still photo and a moving graphic) into one composite image. Most of the Photoshop features depend on the image you are working with, however, Photoshop does support dragging layers to other layers to reorder them. A variety of crop tools are available. Clipping Path provides an interesting way to work around difficult clipping areas, including white backgrounds, dark elements, and any type of image that is difficult to cut out of an image. The transform tools allow users to distort the shape of the image. Adobe has described in its Photoshop documentation that it provides these tools to make it easy to use Photoshop to create images that are appealing to the eye. Using several tools, Photoshop allows users to create special effects and composite images. Photoshop provides several built-in filters, some of which create interesting effects. A filter menu gives users access to special effects. Adobe offers lots of tutorial videos to support the use of Photoshop filters. **Editing text:** Photoshop's text tool allows users to manipulate text in several ways. As shown in the illustration (page 10), the text tool has several different buttons that allow users to modify text, including adjusting the position of individual characters, creating bullets and numbering, selecting text, and using special effects. Each button has a different function, so that you can choose which tool you want to use. Providing a variety of tools and different

a state court, were not entitled to absolute immunity from § 1983 liability. Recognizing the need to accommodate the federal interests of vindicating a federal right, the Court in the same opinion, noted that in some circumstances a federal judge could be subject to liability for an alleged judicial act: "[W]here a judge acts in the `judicial' capacity of determining disputed claims of entitlement to property or possession of property,... the judge is not liable for such acts, even though he misapplies or ignores the law in performing these functions." 422 U.S. at 803, 95 S.Ct. at 2589-2590. The Court went on to stress that it was not addressing the question of judicial immunity from liability for acts that are not judicial in character. 422 U.S. at 806, 95 S.Ct. at 2591. In the case at bar, we have no doubt that the defendants did not act in a judicial capacity, either as the initial decision makers or as the decision makers when their recommendation was sustained. At the time of the determination of the Board of Directors, there was no pending case involving social security benefits; the appeal had not been decided by the Social Security Administration. At the time the Secretary decided not to reopen the determination of the Appeals Council, the state proceedings were still pending and neither the Bureau of Hearings and Appeals nor the State Social Security Office had rendered any decision on the merits of plaintiffs' claim. Furthermore, even if defendants had acted in a judicial capacity in the original determination of plaintiffs' claim, that determination is not a final adjudication entitled to absolute immunity from subsequent review. While the initial determination may be appealable to the Secretary, there is no evidence that the Board of Directors of the Bureau of Hearings and Appeals or the State Director had ever considered the matter and rendered any decision on the merits of the claim of plaintiffs. Therefore, if defendants have acted at all, they have acted in a purely administrative capacity. Hence, even if defendants were entitled to absolute immunity from liability for some of the acts in question, they would not be entitled to immunity for all of their acts, and would still be subject to suit for damages resulting from their actions. Since this court has already found that the defendants have not acted in any capacity other than that of an administrator, their immunity does not extend to such acts. In the absence of absolute immunity and other defenses, the plaintiff has a remedy in damages and the court must therefore determine what

Scientists have discovered dozens of new species of spider in the Mariana Trench off the coast of the Western Pacific Ocean. They believe the spiders' unique appearance may help them evade predators. The discovery is said to be the first time a spider specimen has ever been found in the trench, which is the deepest part of the ocean. The deep ocean is said to be home to unique species due to its cold water and immense pressure. The new species are said to be roughly the size of a ballpoint pen. Their bodies are black and red, which could be to help escape predators such as fish who can see a reflection and think it is an enemy. "Based on the sample we collected, the number of species we discovered in the Mariana Trench is comparable to that of other deep-sea habitats on Earth," researcher Shunyuan Xie, a postdoctoral fellow at the Deep-Sea Science Center at the Academy of Sciences in the Institute of Zoology, told The National Geographic via The Guardian. "The Mariana Trench appeared to be home to a higher biodiversity than any other known deep-sea habitat." Xie explained that the spiders are known as burrowing spiders, and his team of researchers found them in the dark trenches of the Mariana Trench. Deep-sea scientists are concerned that climate change will lead to the extinction of species as pressure on their habitat increases. The researchers who collected and analyzed the new species of spider are reportedly concerned about the impact that global warming has on their habitat. "The Mariana Trench is like the world's largest sponge. Now more than ever we have to look beyond the abyss," said Susanne Lips, a deep-sea biologist who is also working at the Academy of Sciences. Xie added that the new species' unique appearance may be the result of their environment. He pointed to the fact that while no spiders have been found in the deep ocean, the unique physical features of these spiders are similar to known spider species that have been found in habitats with much higher temperatures. "The deep sea is the last uncharted area in this ocean," said Xie. "I believe that the Mariana Trench is the last pristine ecosystem on earth and the situation in the Mariana Trench is probably similar to that of the deep sea in the Paleozoic era."Q: Img sprite in canvas works on first run, but not on second My web page has
