in 2004, electronic arts released a free promotion of the command & conquer series entitled command & conquer: red alert 3. the promotion offered free downloads of the game for mac os x, windows xp, and windows 2000. in addition, a player could win one million of the promotional credits (which were obtained through the promotion's "clan" game) in order to receive an advance copy of the game. however, to win the credits, players had to engage in a series of matches to play against the computer ai. the number of matches a player won against the ai would increase his or her total credits. while the promotion was good for the game's development, it also caused confusion among players who were unaware that the promotion was a promotional opportunity and not an actual title in development. in 2004, electronic arts released command & conquer: red alert 3 for mac os x, windows xp, and windows 2000. this version of the game was set in the future, where tiberium was created by the scrin and is now a corrupting influence in the world. the player takes control of the global defense initiative to reclaim the earth from the scrin and their allies. on september 14, 2004, electronic arts announced that it was moving the game's development from westwood studios to ea los angeles. this was a major development as the company's "westwood studios" were already working on the star wars: the clone wars series. ea also confirmed that the new game would use the same interface system and units from the command & conquer series. the only significant change was that the final game would be known as command & conquer: yuri's revenge to avoid confusion with the 2004 red alert 3 promotion. ea would make a patch to the final product to correct an error which did not allow the player to order nuclear strikes. the final game was released on october 20, 2004.

the command and conquer 3 team is working very hard to deliver the most immersive and exciting online experience ever. the team at westwood has been hard at work preparing for the launch of c&c generals, a major update to the classic and highly acclaimed c&c series. the new version of command & conquer: tiberian sun was released and can be found on the red alert 20th anniversary web site. it is free and takes advantage of modern dvd playback hardware. watch a video demo. the forums are a great place to go for help with your command and conquer game. there are different sections for gameplay, gameplay mods, file sharing, and so on. if you need help creating mods, you can find help here. the ability to save games is different for command and conquer games. the only way to save a game is to exit and enter the console (the command line) and type in "save". you can also set up different save games for different games in the same command and conquer installation. the original command & conquer series was always a multiplayer game, but the older series were also well-suited for single-player campaign. the command & conquer remake, as a single player game, is single player campaign. it is a remake of the command & conquer standalone game: command & conquer: tiberian sun. the game was originally released on december 8th, 2004, as a standalone pc game and a dos port, and it was later re-released for the xbox in 2006. while the game's story is an interesting, if not wholly original one, the gameplay is very similar to the original command & conquer by westwood/ea, with a few variations. the variation is the omission of the very resource-hungry base building, which makes sense considering the game's focus on more of the solo aspects. the missions are simple enough to be played as a single-player, if you'd rather not have anyone else around. 5ec8ef588b
