### What's New In?

HarmonyBuilder provides access to a fully-featured harmony-writing environment and works as a replacement for the keyboard. It's keyboard-inspired, but also more powerful. The chord input technology is totally new, and enables you to make chords in a variety of ways, even entering chords for more than 4 parts at a time, with just a single button click. The 'meld' function enables you to blend chords and notes together, to create exciting rhythms. New Features: \* New Sound Engine, featuring 10-voice processing, with chord input technology and background noise suppression for ultra-clean music playback. \* Harmony Wizard: prompts you to pick a chord progression style to suit your harmonic ideas and mood. You can create chords with just a single button click, or enter note combinations by nudging the note head. \* New Mixer and Master Functionality: access Harmonix Mixer and the Mixer dialog box, or use HarmonyBuilder's proprietary Master functionality to save a mix and make it playable as background music. \* New Meld Functionality: select a blend of the most relevant notes from one or more tracks, and the harmony wizard will automatically select chords for you, to combine with the selected notes. \* New Metronome Functionality: enter beats by using the metronome function, or click and drag to tap the number of beats you wish to play. \* More built-in metronomes, including an adjustable metronome that's based on the length of the song you're working on. \* New Project Wizard: open a project in a new session, as a new harmonic work. The Project Wizard will take care of adding track to each page of the project. The Project Wizard will also save your projects, so you can continue working on a project from any computer. \* Numerous documentation upgrades, including a FAQ section. Pricing: Users with serial licenses can upgrade at any time during the year at a 10% discount, and new customers can purchase with a discount at the time of purchase.
