The Sharpe Ratio - SWR (Simple) is a robust, open-source, and lightweight Monte Carlo simulation platform for equity and fixed income options. It uses a fully customizable Monte Carlo option pricing engine, which is provided by Black-Scholes options pricing model. The model calibration relies on advanced statistical modeling techniques including (random walk, geometric Brownian motion, stochastic volatility, multi-curve states, auto-regression, long memory, long-range dependence, and short memory) of historical option pricing and historical volatility, allowing very accurate calibration of the model using the calibration database built in the application. The model is intended for both academic and non-academic users, depending on the use case and preferences. The SWR applies in a pure Monte Carlo framework using our own open-source stochastic volatility options model. It comes with several modules for different type of investment or traders including management, day trading, technical analysis, and dividend. It is designed with efficient framework for debugging and debugging with user-defined scenarios and batch simulations. The application is always free and will never be in the dark ages. As an open-source software, it is released under a specific Apache 2.0 License (no copyright). In addition to the common features of all Monte Carlo simulations including simulation, historical back-testing and reporting, it also provides user-defined features including pre-calibration, API, and partial independence.
