The Interactive Experience: Mio Garden is an interactive experience where the camera stays stationary, so you can explore and interact with our magical world at your own pace. Everything from the path you take, to how you position the food you give, to the shape of your lantern, or even the height of your kendama, have a profound affect on the game's results. Your participation is truly what creates the experience, each time you play the game you're weaving a different story, as well as you can determine the outcome. The environment: Take a stroll in our garden and witness the magic of the lanterns as they transform into water and fire. Feel the soft breeze of our forest as you play the drums and the wooden bells, or observe the tranquility of our pond through the little chain of lanterns. This environment changes constantly throughout the day, to give you a more memorable experience. The soundtrack: We believe that music plays a very important role in conveying the experience, story and mood. That's why we've invested heavily into crafting an impressive soundtrack to accompany the experience. A variety of instruments and voices are used to give the experience a distinct vibe.

The music and soundtrack were provided by the talented Oli de Jager from Studio 3D. Mio Garden was built using Unity, and is compatible with Google cardboard and 3D-on-Cardboard headsets. Image & Audio Credits:
