Like MacLife 's review, this one focuses on the application's capabilities rather than its functionality. When MacLife compared the stand-alone version of Photoshop to the version that comes with Apple's Creative Cloud package, it concluded that the Pro app on iPad is less elegant and better placed to provide many of the sort of powerful, carefully crafted features that its more limited cousin on the Mac lacks. (MacLife's comparison also includes a look at the Pro hardware requirements and a look at the workflow efficiency of the iPad version, both of which we cover below.) The biggest issue with Photoshop on iPad is that while you can do a good deal of creative work on the go or in any environment where you have an internet connection, storing your finished work is the most difficult and limited. Photoshop on iPad does offer version control, but that only works in the Cloud Libraries feature, which automates the process of moving, renaming, and organizing images that are edited or saved, but not yet uploaded to your Creative Cloud site or elsewhere. A user I know who is a photographer has found this feature to be an excellent way to organize his work, but it's not as effective if you're a graphic artist who edits and explores a lot of photos and other files with the intention of returning their primary version to the Cloud. Although the iPad Pro's magnetic keyboard accessories make many tasks easier than they might otherwise be, I agree with the conclusion of MacLife's review that working with the keyboard is the best, most useful approach for creators who need Adobe's powerful image-editing features and who work a lot with the "raw" files that might have come from a digital SLR camera, scanner, or iPhone.
