Photoshop is one of the most popular image editing software for use on the web and on mobile devices. It's a great tool for those who need to change colors, remove backgrounds, or change the contrast of an image. But, if you want to learn how to use it, you'll need to know what it can do. This guide to Photoshop tutorials shows you how to use Photoshop to change colors, change the contrast of an image and to remove backgrounds. You'll also learn about layer styles, the eyedropper, and how to add a border to an image.

Until now, Lightroom has been horribly slow at scanning images (and saving them). Photoshop has had a "Instant Preview" feature whereby a canvas was drawn in the background, and a new preview drawn over your image; you'd then have to decide whether to close the image or not. Lightroom improved upon this by creating a short thumbnail when you import images. Now, when you import RAWs over URIs, Lightroom includes them as thumbnails. In addition, images are now displayed in the "Details" panel immediately, which is a great improvement over requiring you to access the Book module to double-click them. When you see a thumbnail, simply click on that thumbnail to reveal the full image. I think it's a great idea, but definitely has problems with it. The most annoying thing is the absence of a standard Save function for JPEGs. Great idea there, but unfortunately Adobe has opted for the opposite: it has given us a standard Save function for RAWs only. Another annoying aspect, is that there are still some very basic restrictions. The most important is the ability to only work with RAWs, or flatten the picture. That is a pity. If you want to work with JPEGs as well you should have the ability to switch between them. Bottom line is that I really don't care for your flavour of Windows or for your way of handling pics (quite frankly, I'm clueless about Photoshop). I've tried before to teach my husband how to use your programs and it goes like this: "how do you create a new document?" "it's under the menu bar. then you select picture from the library...why can't you do that on the right?" "there's a button to select pictures in the library that's it...it would be nice if you did it for me." "do you have any idea what windows is or how to enable my friends?" "it's under the menu bar." "oh, yeah? well, I didn't get that." "it's just under the menu bar." "I. DON'T. RECOGNIZE." I've never met anyone else like that. It is really a crap shoot. I know we can talk about the features that can be done with layers or quick fixes, and that is all fine but it's still quite hard to figure out how to do all these things. I've had great success getting through it by having someone who is extremely technically adept suggesting things as I experiment. I think that the bottom line is that you can use Photoshop to create absolutely any kind of picture. I've done it numerous times and I can, but it's not as easy as it could be because the buttons and the layers are not explained. The program does NOT explain ANYTHING! This is the number one reason that I can't teach anyone how to use the program! I think that a next version of the program should have large, easy to understand buttons, you know, like a notebook from the late 50s. On the top page we will have "folder" with "book", "leaf" and "tree". The "leaf" will have "picture in a folder" and "picture in a collection" on the right and "Flatten image" in the left, and "picture on the top layer" will be on the bottom, and "new collection" on the right. I'm hoping that you will appreciate the comparison you will be able to make. You may laugh now, but this is the biggest problem that I have had. I tell my husband that is the problem with software in this day and age. That's right! He has decided that after more than a year of using Photoshop that he will stop using it and he's sold this ridiculous notion of "leave it to the professionals." Well, I bought his Santa hat at a garage sale and I'm keeping it! I don't know that much about computers, but I do know that he knows a lot more than he claims he does. A friend of mine, she's a blouse designer, is pretty good at it, too. She can do things on a computer that I have a hard time doing. I think that the program is so difficult to learn because the buttons are often placed very far away from each other and the text is too small. This means that people don't find it easy to learn and therefore they don't really want to use it.
