SIW Portable is an all-in-one system information software which offers the most essential data about a computer. You can view installed programs, hardware information, installed components and registry data, save it to a file or send it to your friends. With this system information software, you can view a lot of useful data about your computer system, such as: Operating system information, hardware, BIOS, network adapters, connected devices, installed programs and much more! You can also print the system information in the HTML, CSV, TXT and XML formats. Also, you can copy any fragment of text from SIW and paste it to your documents. Furthermore, this program supports most features, such as saving to a file, copying to the clipboard, disabling icons in the system tray, sharing, setting and changing computer settings, and more. The user interface of the program consists of a standard window in which you can view information about your system and software. It uses a low to moderate amount of system resources. Plus, some areas can take several seconds to load (e.g. "Windows Update"). We haven't come across any problems during our tests. Since SIW offers very detailed information about a computer, we mainly recommend it to experienced users.

System Requirements: Windows 98/ME/2000/XP/Vista/Windows 7 Version: 7.7.45.0 Coverage analysis of Windows Registry The Windows Registry (a.k.a. the Windows Registry Tree or the Windows Registry Viewer) is a database that keeps information about your computer system in a hierarchical structure. It also contains information about your installed programs, hardware, network adapters, installed drivers and so on. However, the very existence of this system proves that Microsoft felt the need to hide important information about your computer system. In addition, the Registry can create additional problems, especially if it is not properly maintained. To quickly probe the Windows Registry, you can use the Windows Registry Analyzer software from SIW. This tool can analyze your Windows registry and provide information about the system registry tree. It can also display a registry tree and let you find information about all of your installed programs, hardware and network adapters, along with the corresponding data values. The program was developed for SIW and doesn't require installation. Thus, after you run it, all of your Windows registry entries will be updated. We were unable to find any malware on your computer. However, for your own safety, we recommend that you scan your PC with various anti-malware tools. The Windows OS has its own built-in anti-malware software, which can help you keep your system safe from malware. However, the anti-malware 2edc1e01e8

With Portable SIW you can perform a complete analysis of your PC. The program identifies Windows executables, helps you find errors and security issues in installed applications, checks shared components and drivers, determines hardware information and loads drivers. SIW offers a wide range of settings for the analysis.
