hi, i have just put conviction on my xbox and played the missions "spire" and "revolt". i have a problem with the game, when i get near the enemy you can see everything from the front and from behind, which spoils the immersion. i have the game all ready to start a new game but i cant see any enemy information except for the name and the model of the chocen. and thats not quite right. i'm having a trouble running splinter cell conviction on pc as when i play splinter cell blacklist there are always little glitches where when i shoot someone they are left alive. i have tried holding down r to reload but this does not seem to solve the problem. please help! i have an issue when i take out the usb splinter cell conviction is running i get a message saying "error taking device out" and after 5 mins(sometimes more) i get a message saying "error while taking device out" please help. also when i try to run the game it does not start when i hear the siren, please help! i'm having problems with the control i have here is the steps of what i've done-i installed the game, set up a key, started the game, and played it- however i have a problem when i enter the mission i get a blue screen and i have no audio and none of the keys or turn by turn - help-it worked fine on my dads computer, and never had a problem with it on his. when i go to my friends computer it plays fine-i have tried reinstalling the game with no response, and have tried it on two different computers-i am going to start a new game and pray its better-any help will be appreciated. thanks for reading this.

Ubisoft Splinter Cell Conviction English Language Pack

hello, i have a general question i hope you can answer. when in multiplayer mode. how is the blood splatter of someone killed. does everyone who is killed leave a blood splatter?

can it be heard? do i leave a splatter or only if its hit in the head? i love playing in multiplayer and would like to know the details so that i don't miss it. i've been working on splinter cell blacklist on a macbook pro and just can't seem to get it to work. when i boot the blacklist disc, i get the flashing screen and the black splatter effect that made me love the game. then i start up the game, and it says i'm missing a graphic driver. then it says i have 2 graphic drivers. then it says the graphic drivers are being checked for compatability.. then the game just stops. any help would be greatly appreciated. just after the release of the game, the servers were locked down and people were unable to use their weapons and equipment. as soon as the servers went down, the weapons and equipment came with the game and were stored in the game data folder, then when you bought the dlc for the game, they came with the dlc. so if you bought the linton's island dlc, you would get the weapons and armor in the game, and the dlc would be stored in the same folder. but someone was kind enough to figure out a way to make this server patch work, and with his help, most of the user's weapons and gear were put back into their respective folder. but if you bought the art books, the soundtracks and the story cd's, those were also stored in another file, which meant that you had to get the dlc again, but with the patch, the files where moved back into their original place, so you'd get the weapons and armor again but you could get into game again. 5ec8ef588b
