Download minecraft server for linux? Server for minecraft under linux - linux-portalru! Download minecraft server for linux - minecraft. Download minecraft server on linux. Download the server minecraft for linux. Download minecraft server for linux. Servers servers Minecraft PE Servers servers Minecraft PE Hi all, here is Mister Bunker and today I will show you how to create your own server for minecraft on linux. It's very easy and simple. You can create your own server, play in it and communicate with your friends. But there is a but! If you don't know how to create a server, then this video should help you: So, what we need to create a server: 1. XAMPP or Denwer. 2. VPS/VDS 3. ISPmanager 4. Apache 5. PHP 6. MySQL 7. Zend Optimizer, not required for the server 8. PHPMyAdmin to create a database 9. Site script, well, you can do without it 10. Domain or hosting, if you have, it is not necessary 11. File Exchange. To begin with, install XAMPP or Denwer. Go to <http://www.apachefriends.org/en/latest/> and download the latest version. After installation, you can go to <http://www.apachefriends.org/en/index.html> and check if everything is okay. If everything is fine, then move on. After installing Apache on the computer where the server is planned, it will give this message: In this case, to install Apache, you must disable the firewall if it is installed. After the reboot, you can start Apache. To do this, you need to open <http://localhost> - this is the address to which the browser will refer in the address bar when accessing the server. And if everything is normal, the browser will give the message "Access is allowed" or something like that.
