Once the dreaded "shopping" phrase became more and more common, many companies and persons began promoting their products by labeling them "photoshopped." It's a term that is used far too often for products that are in no way "photoshopped."

But did you know that there are other types of images that you could use Photoshop to manipulate? Here are five types of images that can be easily edited using Photoshop: Grayscale Grayscale images are images made up of only gray tones. This means that there are no details, and the image only has one color. Photoshop can add back the original color or manipulate the grayscale images in its multiple layers. Black-and-White A black-and-white image is any image that has only black and white tones. Although black-and-white images can have many different shades, it could be as simple as a line drawing. Monochrome A monochrome image is any image that is only one color. Most images are monochrome, as they are often only a solid color of blue, green, red, or black. Color Adjustment Color adjustment images are when a photo is combined with different shades of color. This could be anything from colors of the subject or the pattern of a design. Photoshop has basic tools to change the color of the object or design of the image. Multilayered Photoshop allows the user to modify multiple layers to make text or an image appear on top of another layer. This is called "multilayering" or "layering." Simple Photoshop Editing You can use Photoshop to edit images quickly and easily. This is because of the layers in the editing tool. Layers in Photoshop are used to organize an image into groups of individual parts. This is like painting over the image and then re-painting over the area. You can now manipulate the image better than simply inserting a piece of paper and cutting it out. Layers also help you create special effects within your images. For example, you can make an image appear to be a double image of the same subject (because the layers have different backgrounds and the layers can be moved). You can even use photo filters to change the colors of your image.

You can even leave a brand logo on top of your image, as these are easy to use, and are transparent. These are

Isolation of 2-acetylaminofluorene-DNA adducts from hepatic DNA in rat by diethyldithiocarbamate chromatography. 2-Acetylaminofluorene (2-AAF) is used to study the modulation of multiple chemical carcinogenesis and the effects of xenobiotics on carcinogenesis. In the case of a single chemical carcinogen and in the absence of xenobiotics, only nonreactive and unstable adducts can be detected and quantified. The isolation of reactive DNA adducts from DNA of the various tissues of the rat and of other species is hampered by the presence of multiple chemically reactive adducts, both unstable and stable, in the crude DNA preparations. We have developed a method that isolates 2-AAF-DNA adducts from rat liver DNA by diethyldithiocarbamate chromatography. Liver samples were treated with diethyldithiocarbamate for 2-5 h, the adducts were desalted, and the nucleic acids were eluted from the column in an alkaline buffer. This purification gave rise to adducts in a ratio of approximately 10:1 adduct:nucleoside for virtually all of the stable nucleoside adducts. Although the diethyldithiocarbamate-chromatography method is relatively time consuming (13 h), the direct isolation of chemically reactive adducts from crude DNA preparations provides an effective procedure that can be automated to screen for the presence of chemically reactive adducts in tissues of different species. Weight discrimination and weight-related victimization among female college students. This study examined weight-related discrimination and weight-related victimization among a sample of college women. University of Colorado students ($N = 649$, $M = 19.74$, $SD = 2.82$) were classified as overweight ($BMI = 25.0-29.9$) or obese ($BMI \geq$ or $= 30.0$). Female college students reported almost daily exposure to weight discrimination in daily life. They indicated that their weight is used as an excuse for most situations including customer service and work-related situations. College women were 2.2 times more likely to experience weight-related harassment than a woman of normal weight. Relative to a woman of normal weight, overweight and obese women were more likely to report loneliness, hopelessness, guilt, and shame, and to indicate that they had contemplated suicide. Overweight and obese women were
