1.28 Crack is a great software that will help you converting video/audio format to..no() : m_predictedLabels.at(labelsIndex).no()); const TinyVector predicted = m_streamFormat.read_double(); const bool is_negative = predicted[predictedIndex].no(); if (labelsIndex Q: preg_replace get the first word that appears anywhere in a text I'm reading a Wikipedia article and I am trying to replace a line with a hyperlink, but I need to get the first word that appears before the hyperlink. How would I do that with preg_replace using the PHP preg_replace() function? Here is the HTML code: "The year 2011", "by mid-2011, all nations of the world [...] had ratified, at least in principle, the IAEA Guidelines, and the majority of states had accepted a working policy for the entire nuclear fuel cycle", Here is my code: \$str = "The year 2011", "by mid-2011, all nations of the world [...] had ratified, at least in principle, the IAEA Guidelines, and the majority of states had
