I have set up a basic rails application and added the Spree Gem, with the standard Gemfile. From what I understand, you can add custom actions to the admin pages using the action\_name method. How do you create a function and then call it on an admin action page? For example, the file admin/create\_cart.html.erb contains: Which then goes to the Spree/app/admin/create\_cart.rb file: def action\_name(action) if action == "create\_cart" "create\_cart" elsif action == "add\_cart\_item" "add\_cart\_item" elsif action == "delete\_cart\_item" "delete\_cart\_item" else "unknown\_action" end end Do I need to implement this in a module? Can't it just be declared in app/admin/create\_cart.rb? I need to know how to generate the action for every admin page. A: You can add functions to the controller, but better to keep it in a module and then include it in your admin controller's controller: app/controllers/admin\_controller.rb module YourModule def your\_function ... end end class AdminController Enhanced cell repopulation and integration of islet xenografts after ca3bfb1094
