trutoplaserv61065 wrote: I have 2 of these, one of which does not work completely (contact with the mass has disappeared), the second one works, BUT it does not start. In this case, in both cases, the engine does not seize with a half turn. The first time the starter in the service (at the station) was removed and cleaned, after that the car started up. Now the situation has repeated itself. After starting the engine, the speed rises, the car runs, but at one moment (sometimes not at a certain time interval) it stalls. After that, it won't start anymore.
