To make accurate distance measurements, you can use Pixus -- a software application that allows you to use the Windows Desktop Ruler functionality in Windows 7, Vista and XP. At the same time, it has the advantage of being simple to use, yet powerful enough to perform its tasks. Thanks to its innovative interface, the program can be set up so that the ruler always remains on the desktop, allowing you to use the tool with minimal effort. Pixus includes built-in functions for measuring horizontal and vertical distances, and you can select different preset size modes to make your measurements more convenient. Additionally, you can also choose from a variety of themes to personalise the look of the tool with their own colours and patterns. Pixus has a minimal footprint on your computer resources, and requires no additional programs to be installed. You can also set it up to remain on top of other applications. Thanks to this, Pixus makes efficient use of available screen real estate, and your PC doesn't slow down when you make your measurements. Main features: Plenty of interaction mechanisms for easy and quick measurements Ability to set a ruler to remain on top of other applications Take advantage of different size options Get inspired by numerous desktop themes Several modes for distance measurements Ability to share your ruler with other users Simple and easy-to-learn interface Compatible with Windows 7, Vista and XP Pixus (Control Panel) allows you to view the ruler in two sizes: a very small one that's moved around by the mouse, and a large ruler which is manually scrolled by pressing the scrollbars. The tool can even be set to stay on top of other programs. Once Pixus is opened, you'll be able to measure distances between any two objects in your computer's screen or on the desktop. To this end, you need only to drag the ruler on the area where the objects you need to measure are displayed, or simply click on the ones you want to measure. When you finish, you will see a result in pixels. This is achieved by the application calculating the distance between the following two points: The point where you've placed the ruler The point of the object on the screen where you've clicked to begin measuring the distance There are other ways of measuring distances with Pixus as well. For instance, you can do it the exact opposite by selecting a part of the screen where the ruler is b7e8fdf5c8
