What is the use of callback method in mulitple threads?

I don't understand what is the use of callback method when every one knows that it is synchronized with code and therefore, it is single

threaded (at least). So, what is the use of callback method? Is it possible to use this method when we are running multi threads?

A: It's very similar to threads (that is, in fact you can think of it as a way to run code you have in another thread in the same thread) - except instead of

getting access to the data the e79caf774b
