The best all-round pedal for a wide range of musical styles - from the blues through to heavy rock, this is the all-rounder guitar pedal that virtually does it all. XLFuzz can easily deliver boost, a presence boost, EQ, compression and fuzz, even creating a clean distortion from the overdriven sound. Use the amp pre-amp section for adding just the right amount of gain, compression and EQ. A number of XL Cream FUZZ's features are quite unusual, being that it has its own selectable distortion gain and gain feedback, and the overdriven channel allows a bit more tonal variation than the other channels. The XL Cream FUZZ has a freewheeling 'salt and pepper' distortion sound with the best-sounding 'distortion' range, covering the whole spectrum of that tone, from heavily compressed tight-sounding classic rock sounds to heavily distorted modern rock sounds. The gain of the distortion can be used for any situation, whether you need to place a bit of drive or just a bit more bite in the mix. This is a great all-round pedal for a wide range of musical styles. XL Cream FUZZ Features: True-bypass design with EL34 preamp stages, four gain channels and master volume. Gain controls - 1, 2, 3, 4. Gain feedback controls - for those who like to experiment with their pedals a bit. 50 Ohms, 1K, 3K and 12K resistances. XL Cream FUZZ Specs: Maximum input range: 0.5-10V Signal path: Input: 12AX7@150, 5Y3@0.5, 2N3055@0.7 Output: 1 x 15K Ohm Dual Power Amp XL Cream FUZZ Tech Specs: XL Cream FUZZ Manual: Input: The input of XL Cream FUZZ is protected against overvoltage. The output is protected from reverse power. Output: XL Cream FUZZ is equipped with a boost gain which is independent of the other gain stages and can be used as a separate boost. The 2nd channel and the output channel can be used for a clean distortion. The overdriven channel can be used to distort a signal. Output: The

What's New In XL Cream FUZZ?

The Cream Fuzz from XHAL combines a distortion effect in one stompbox. Simply by touching a knob, a signal will be distorted and a Tube amp like sound comes from the pedal. Then, the signal can be processed with its Reverb and Delay effects that can be applied to the signal before the distortion is added to the mix. Perfect for shredding and recording, this pedal can be used with any kind of Guitar or Bass amp. The Cream Fuzz features custom analog circuit architecture, allowing us to produce a wide range of high-fidelity distortion. When running in the boost mode, this pedal has a low noise floor, and is usable even in the most noise-infused recording environments.
