This software is a CD/DVD/Bluray labeling and cover designing program that allows you to create custom labels for your CDs and DVD media. Disketch CD Labels Software by NCH Software. Full version for PC. Disketch 3 Disc Label Free Download.. As promised, I've put together a guick intro to how little I know about this strange world of intellectual property. Maybe I'll be able to help. First, there are two groups of intellectual property. Intellectual property owned by a company that files for a patent. Intellectual property owned by an individual. Intellectual property owned by a company may be classified into two groups. A patent is an invention which gives the owner the exclusive right to make, use, and sell the invention. A patent can't be granted for anything that is not novel. A new use of an existing invention is not considered to be a patentable invention. This is called prior art. So for example, "Zip Drive" was a novel invention; that's why it was patentable. Similarly, "Reverse osmosis" was a patentable invention; that's why it is patentable. But "reverse osmosis in a water bottle" would be prior art and hence not patentable. A patent can also only be granted for a limited time. After this limited time, the patent becomes prior art, and anyone can use it. Patents are expensive. They also are effective in that, once a patent is granted, all else is off-limits. For example, if someone else starts using your invention for a different purpose, that inventor doesn't know if the new use infringes on your patent. In fact, they can't tell if it does, because your patent is supposed to cover the new use. So that inventor can't file for a patent for their new use. This means that, if someone else starts using your invention for a new purpose, you can't sue them. If you did sue them, and the case went to trial, you would lose. It's called prior art. Prior Art A patent isn't worth much if it can be used and infringed on by anyone. So the patent f988f36e3a
