BRD crack Cotton is one of the most important crops in the world, and in the United States alone it accounts for over half of all agricultural exports. Cotton also is the leading source of natural fiber for the textile industry. In the United States alone, over half of all cotton fiber is used by the textile industry. Various efforts have been made to improve cotton plant and fiber characteristics and the process of producing cotton fiber. For example, cotton plants having increased yield have been produced by radiation treatments that kill fertile pollen grains, thus preventing fertilization. This technique, called gametocides, can reduce undesirable seed set resulting from self-pollination of the cotton plant. Gametocides have also been used to influence plant height, such that short plants result from applying such techniques. Other efforts have been made to improve cotton plant and fiber characteristics by applying compounds to cotton plants which exhibit various influences on the formation of cotton fiber. Such influences include the length of fiber cells as they grow. One such method of improving cotton fiber yield by applying to the cotton plant a compound that promotes fiber elongation is disclosed in WO 2008/070264, the entire contents of which are incorporated herein by reference in their entirety. The present invention relates to germplasm, cotton plants, and cotton fibers with improved yield and fiber length characteristics. Pentagone has developed a new autonomous robot dubbed Zapping that can make a human look silly. Picture a square box with a light showing on the bottom. That's what the Zapping looks like in motion, aside from the fact that it has a light flashing horizontally across its back. That light flashes to prompt humans to lean back. Humans go back far enough and they fall off the chair. It's comedy for the entire family. The young and old alike feel like they are back in elementary school where the teacher throws you in the corner. It can be used in fun and serious situations. Editors' note: The diagrams in this article are from Zapping. It is unclear whether or not the design of the robot has been altered since the project was completed. Pentagone is continuing to improve the robot so it can better perform 570a42141b
