### What's New In?

PDF2DOC Converter is an application with a title that perfectly displays its functionality - it allows you to transform PDF documents into DOC files. The tool can be easily handled by first-time users. The interface of the program is plain and simple to navigate through. PDF documents can be imported by using the file browser only, because the "drag and drop" method is not supported. Batch processing is not possible. So, all you have to do is specify the output destination and filename, in order to proceed with the conversion task. On top of that, you can set the page range and enable PDF2DOC Converter to open the output document after conversion. The simplistic document conversion software requires a low-to-moderate amount of system resources, has a good response time, quickly finishes a task and manages to preserve a good image quality in the output document. We haven't come across any issues during our tests. On the other hand, the fact that batch processing is not supported is a major downside. Also, PDF2DOC Converter captures a snapshot of the PDF documents and places it in the Word file, so the text cannot be actually edited. We recommend you look for something more advanced than this tool.
